

HandsMen Threads: Elevating the Art of Sophistication in Men's Fashion

Project Overview

HandsMen Threads is a Salesforce CRM solution developed for a fashion industry organization to manage customer, order, product, inventory, and marketing information in a centralized system. The solution focuses on maintaining data accuracy, improving customer engagement, and automating repetitive business processes.

The CRM provides a structured data model connecting customers, orders, products, inventory, and marketing campaigns. Salesforce automation is used to handle order confirmations, low-stock notifications, loyalty status updates, and scheduled inventory processing.

The project combines Salesforce configuration and development features including custom objects and fields, relationships, formula fields, validation rules, profiles, roles, permission sets, Record-Triggered Flows, Scheduled Flows, Apex Triggers, and Batch Apex.

Objectives

The primary objectives of the HandsMen Threads CRM are:

- To create a centralized Salesforce platform for managing business data.
- To establish relationships between customers, orders, products, inventory, and marketing campaigns.
- To maintain data quality through validation rules and formula fields.
- To automate customer communication through order confirmation and loyalty emails.
- To provide proactive inventory management through low-stock alerts.
- To automate inventory restocking using Batch Apex and Scheduled Apex.
- To implement appropriate user access and security using profiles, roles, and permission sets.
- To improve operational efficiency by reducing manual business processes.

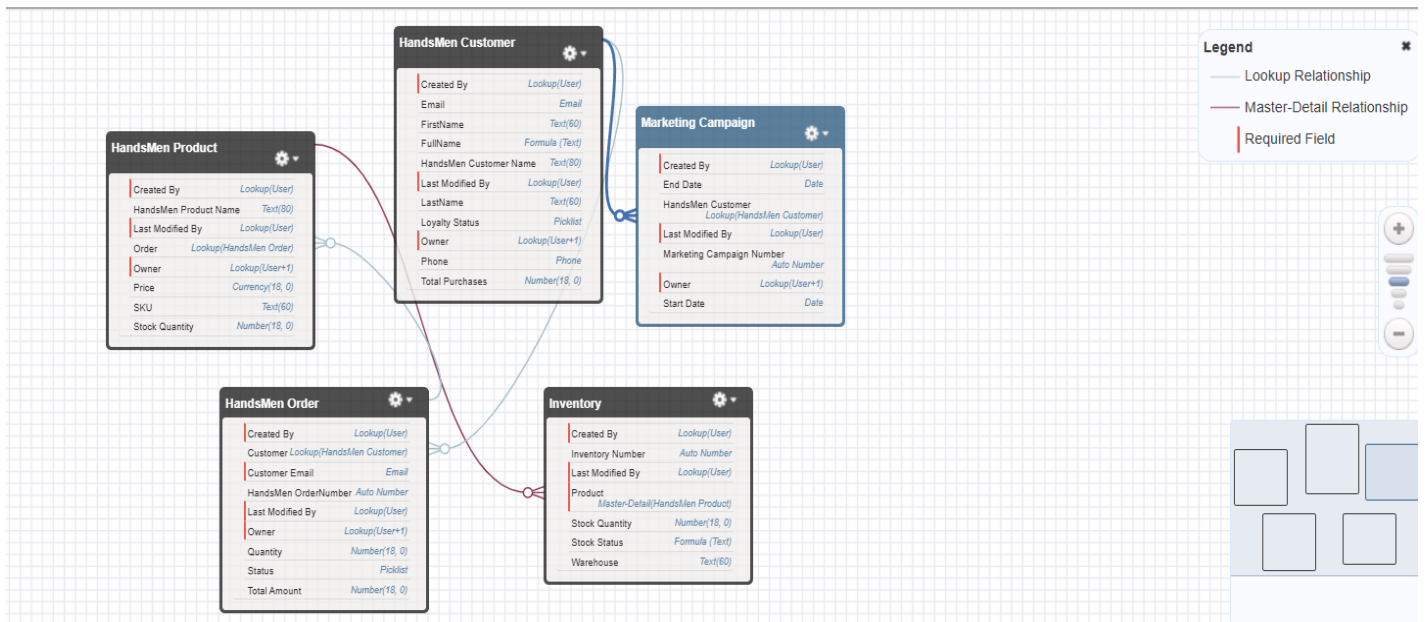

Implementation Details

Data Model

The Salesforce data model consists of the following custom objects:

Object	Purpose
HandsMen Customer	Stores customer information and purchase details
HandsMen Order	Stores customer order information
HandsMen Product	Stores product information
Inventory	Manages product stock information
Marketing Campaign	Stores marketing campaign information

The objects are connected through Salesforce relationships to maintain a structured flow of business information.

ERD/Data Model

HandsMen Customer

The HandsMen Customer object stores customer-related information such as First Name, Last Name, Email, Phone, Loyalty Status, and Total Purchases.

A Full Name formula field was implemented to automatically combine the customer's first and last names.

Formula: *FirstName__c & " " & LastName__c*

The screenshot displays the Salesforce setup interface for the HandsMen Customer object. On the left, the 'Fields & Relationships' section lists 11 fields, sorted by Field Label. The 'Full Name' field is highlighted, showing its formula: `FirstName__c & " " & LastName__c`. On the right, the 'Formula Options' panel shows the 'Formula Return Type' set to 'Text' and the 'Advanced Formula' tab selected. The formula editor displays the formula: `FirstName__c + " " + LastName__c`.

FIELD LABEL	FIELD NAME	DATA TYPE
Created By	CreatedById	Lookup(User)
Email	Email__c	Email
FirstName	FirstName__c	Text(60)
Full Name	Full Name__c	Formula (Text)
HandsMen Customer Name	Name	Text(80)
Last Modified By	LastModifiedById	Lookup(User)
LastName	LastName__c	Text(60)
Loyalty Status	Loyalty_Status__c	Picklist

Formula Options

Formula Return Type: **Text**

Enter your formula and click Check Syntax to check for errors. Click the Advance Example: `Full Name = LastName & " " & FirstName` [More Examples...](#)

Simple Formula **Advanced Formula**

HandsMen Order

The HandsMen Order object stores order-related information including customer, status, quantity, and total amount.

A Lookup relationship connects an order with the corresponding HandsMen Customer.

A validation rule was implemented to prevent an order from being saved when the Total Amount is zero or negative.

This ensures that invalid financial information cannot be entered into the system.

Left Screenshot: HandsMen Order Fields & Relationships

FIELD LABEL	FIELD NAME	DATA TYPE
Created By	CreatedById	Lookup(User)
Customer	Customer__c	Lookup(HandsMen Customer)
Customer Email	Customer_Email__c	Email
HandsMen OrderNumber	Name	Auto Number

Singular Label: HandsMen Order
Plural Label: HandsMen Orders

HandsMen Product

The HandsMen Product object stores product-related information such as product name, price, stock quantity, category, and active status.

The object is connected with order and inventory information through Salesforce relationships.

HandsMen Product Fields & Relationships

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
HandsMen Product Name	Name	Text(80)		☒
Last Modified By	LastModifiedById	Lookup(User)		
Order	Order__c	Lookup(HandsMen Order)		☒
Owner	OwnerId	Lookup(User,Group)		☒
Price	Price__c	Currency(18, 0)		☒
SKU	SKU__c	Text(60)		☒
Stock Quantity	Stock_Quantity__c	Number(18, 0)		☒

Important fields include:

- Product
- Stock Quantity
- Stock Status

A relationship connects inventory records with their corresponding products.

A validation rule prevents invalid stock quantities from being entered.

Stock Status Formula

The Stock_Status__c formula automatically determines the current stock condition.

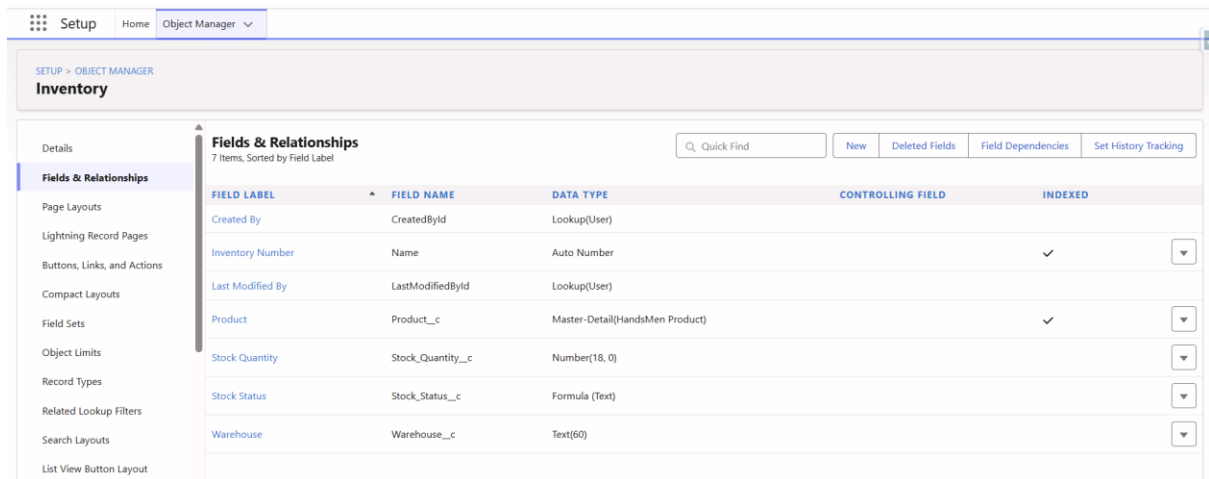

IF(Stock_Quantity__c > 10, "Available", "Low Stock")

The result is:

Stock Quantity > 10 → Available

Stock Quantity ≤ 10 → Low Stock

This provides users with an automatically calculated stock status.

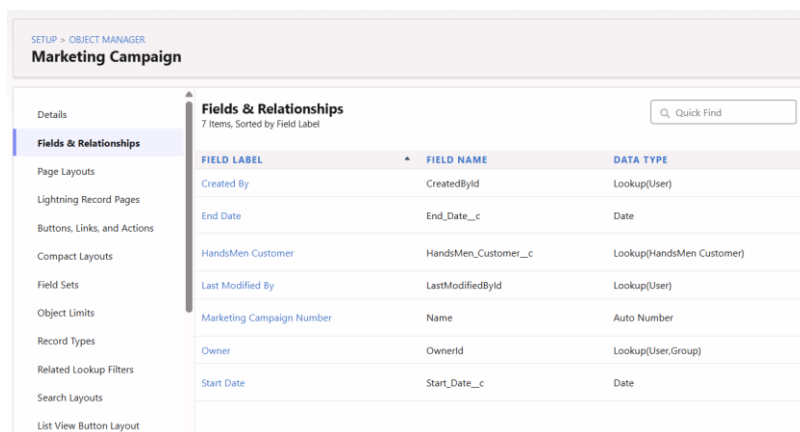

The screenshot shows the Salesforce Object Manager interface for the 'Inventory' object. The 'Fields & Relationships' section is active, displaying a list of 7 fields sorted by Field Label. The fields are: Created By (Lookup(User)), Inventory Number (Auto Number, indexed), Last Modified By (Lookup(User)), Product (Master-Detail(HandsMen Product), indexed), Stock Quantity (Number(18, 0)), Stock Status (Formula (Text)), and Warehouse (Text(60)).

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Created By	CreatedById	Lookup(User)		
Inventory Number	Name	Auto Number		✓
Last Modified By	LastModifiedById	Lookup(User)		
Product	Product__c	Master-Detail(HandsMen Product)		✓
Stock Quantity	Stock_Quantity__c	Number(18, 0)		
Stock Status	Stock_Status__c	Formula (Text)		
Warehouse	Warehouse__c	Text(60)		

Marketing Campaign

The Marketing Campaign object stores marketing campaign information and maintains its association with customer records.

This allows customer information to be connected with marketing activities within Salesforce.

The screenshot shows the Salesforce Object Manager interface for the 'Marketing Campaign' object. The 'Fields & Relationships' section is active, displaying a list of 7 fields sorted by Field Label. The fields are: Created By (Lookup(User)), End Date (Date), HandsMen Customer (Lookup(HandsMen Customer)), Last Modified By (Lookup(User)), Marketing Campaign Number (Auto Number), Owner (Lookup(User, Group)), and Start Date (Date).

FIELD LABEL	FIELD NAME	DATA TYPE
Created By	CreatedById	Lookup(User)
End Date	End_Date__c	Date
HandsMen Customer	HandsMen_Customer__c	Lookup(HandsMen Customer)
Last Modified By	LastModifiedById	Lookup(User)
Marketing Campaign Number	Name	Auto Number
Owner	OwnerId	Lookup(User, Group)
Start Date	Start_Date__c	Date

Data Quality

Data quality is maintained through Formula Fields and Validation Rules.

The implemented validations prevent:

- Invalid order amounts
- Invalid inventory quantities
- Incorrect customer email formats

Formula fields automatically calculate values such as Full Name and Stock Status, reducing manual data entry.

The screenshot shows the 'HandsMen Order Validation Rule' configuration page. The left sidebar contains a navigation menu with options: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, and Record Types. The main content area is titled 'HandsMen Order Validation Rule' with a 'Back to HandsMen Order' link. Below the title is the 'Validation Rule Detail' section, which includes a table with the following information:

The application implements Salesforce security features including:

- Profiles
- Roles
- Role Hierarchy
- Permission Sets

A custom Platform 1 profile was created based on the Standard User profile. Appropriate object permissions were provided for the required HandsMen Threads objects.

The role hierarchy organizes users according to their responsibilities, while the permission set provides additional permissions where required.

User configuration

The guidelines specifically require Profiles, Roles, Role Hierarchy, Permission Sets, and relevant security configuration to be documented.

Automation

This will be the main implementation section of your documentation.

We can document each automation like this:

Order Confirmation Flow

Type: Record-Triggered Flow

Object: HandsMen Order

Trigger Condition:

Status = Confirmed

Functionality:

When an existing order is updated and its status becomes Confirmed, the flow automatically sends the Order Confirmation Email to the customer.

Flow Structure:

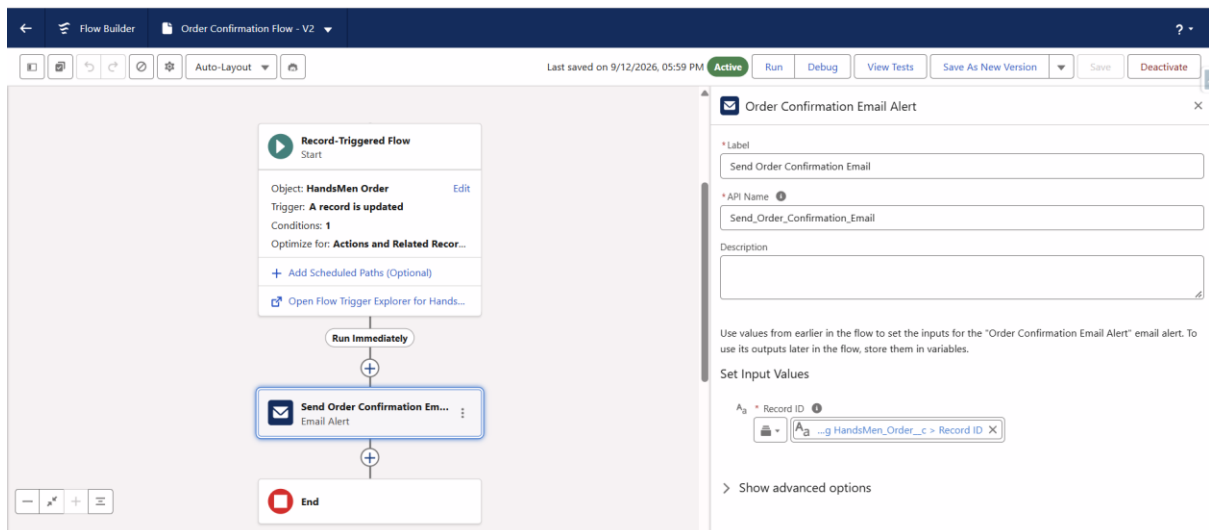

Order Updated

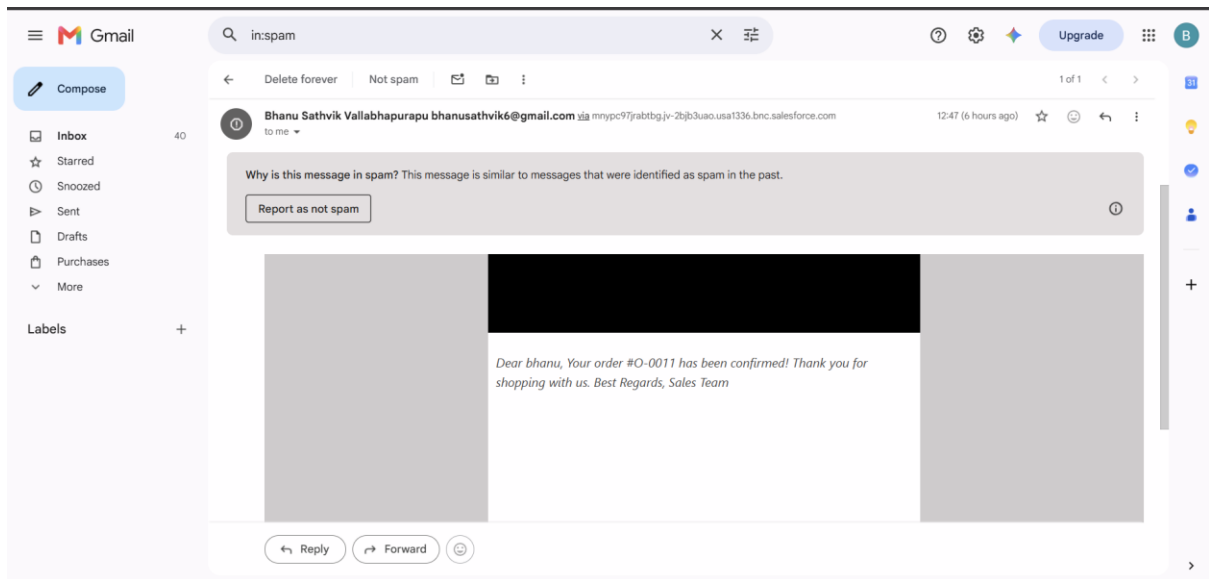

↓

Status = Confirmed

↓

Order Confirmation Email

Stock Alert Flow

Type: Record-Triggered Flow

Object: Inventory

Trigger Condition:

Stock Quantity < 5

Functionality:

When inventory stock falls below five units, the flow automatically sends a Low Stock Alert to the warehouse team.

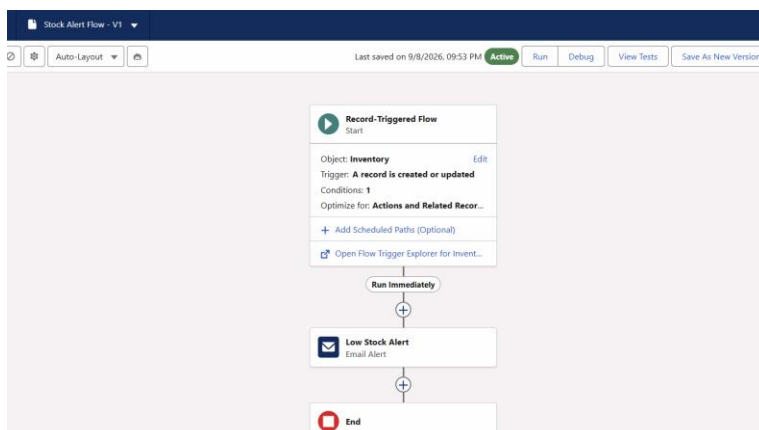

Inventory Updated

↓

Stock Quantity < 5

↓

Low Stock Alert Email

← Delete forever | Not spam |   ⋮

Low Stock Alert - Immediate Attention Required Spam x

to me ▾

Sun, Sep 13, 10:56 PM (20 hours ago)

Why is this message in spam? This message is similar to messages that were identified as spam in the past.

Report not spam

Dear Warehouse Team,

This is a low stock alert.

The stock quantity for a product has fallen below 5 units.

Please restock the product as soon as possible to avoid stock shortages.

Best Regards,
HandsMen Threads Inventory Team

Loyalty Status Flow

Type: Scheduled Flow

Frequency: Daily

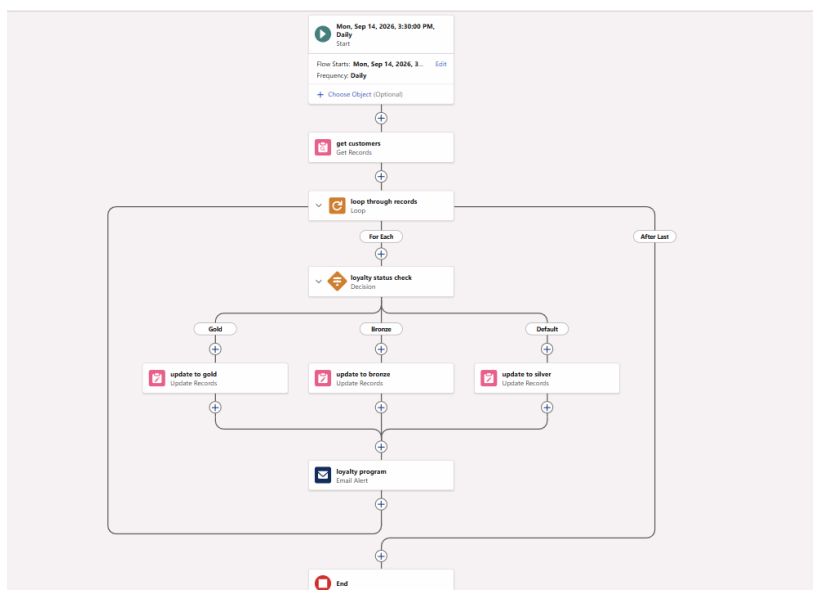

Functionality:

The flow evaluates customer purchase history and updates the loyalty status.

Total Purchases > 1000 → Gold

Total Purchases < 500 → Bronze

Otherwise → Silver

Apex Trigger

The project uses an Apex Trigger on the HandsMen Order object for business validation.

The trigger executes during before insert and before update operations and invokes the corresponding handler class.

The validation logic is:

Order Status	Required Quantity
Confirmed	> 500
Pending	> 200
Rejection	0

If an order violates the required condition, the trigger prevents the record from being saved and displays an appropriate error.

Trigger:

```
trigger OrderTrigger on HandsMen_Order__c (before insert, before update) {  
    if (Trigger.isBefore && (Trigger.isInsert || Trigger.isUpdate)) {  
        OrderTriggerHandler.validateOrderQuantity(Trigger.new);  
    }  
}
```

Handler:

```
public class OrderTriggerHandler {  
    public static void validateOrderQuantity(List<HandsMen_Order__c> orderList) {  
        for (HandsMen_Order__c order : orderList) {  
            if (order.Status__c == 'Confirmed') {  
                if (order.Quantity__c == null || order.Quantity__c <= 500) {  
                    order.Quantity__c.addError('For Status "Confirmed", Quantity must be  
more than 500.');                }  
            } else if (order.Status__c == 'Pending') {  
                if (order.Quantity__c == null || order.Quantity__c <= 200) {  
                    order.Quantity__c.addError('For Status "Pending", Quantity must be more  
than 200.');                }  
            }  
        }  
    }  
}
```

```

    }
} else if (order.Status__c == 'Rejection') {
    if (order.Quantity__c == null || order.Quantity__c != 0) {
        order.Quantity__c.addError('For Status "Rejection", Quantity must be 0.');
```

8. Batch Apex

The project implements Batch Apex and Scheduled Apex for automated inventory processing.

The Batch Apex class identifies products with stock below 10 units.

Stock Quantity < 10

↓

Batch Processing

↓

Add 50 Units

↓

Update Product

The batch is processed in groups of 200 records.

The same class implements Schedulable, allowing the inventory synchronization process to be scheduled to run daily at midnight.

Batch Apex class:

```
global class InventoryBatchJob implements Database.Batchable<SObject>,
Schedulable {

    global Database.QueryLocator start(Database.BatchableContext BC) {

        return Database.getQueryLocator(

            'SELECT Id, Stock_Quantity__c FROM HandsMen_Product__c WHERE
Stock_Quantity__c < 10'

        );

    }

    global void execute(Database.BatchableContext BC, List<SObject> records) {

        List<HandsMen_Product__c> productsToUpdate = new
List<HandsMen_Product__c>();

        for (SObject record : records) {

            HandsMen_Product__c product = (HandsMen_Product__c) record;

            product.Stock_Quantity__c += 50;

            productsToUpdate.add(product);

        }

        if (!productsToUpdate.isEmpty()) {

            try {

                update productsToUpdate;

            } catch (DmlException e) {

                System.debug('Error updating inventory: ' + e.getMessage());

            }

        }

    }

    global void finish(Database.BatchableContext BC) {

        System.debug('Inventory Sync Completed');
```

10. Conclusion

The HandsMen Threads Salesforce CRM successfully provides a centralized solution for managing customer, order, product, inventory, and marketing information. The implementation combines Salesforce configuration with declarative and programmatic automation to improve data quality and business efficiency.

The implemented Formula Fields and Validation Rules improve data accuracy, while Profiles, Roles, and Permission Sets provide controlled access to business data. Record-Triggered Flows automate customer communication and inventory alerts, while Scheduled Flows manage loyalty status updates. Apex Triggers provide additional business validation, and Batch Apex automates large-scale inventory processing.

The project demonstrates how Salesforce can be used to build a scalable CRM solution that reduces manual work, improves operational accuracy, and enhances customer service.
